- Accelerated build-up of bleeding
- Removal or prevention of the spread of poisons
- Absorbs microorganisms
- It effectively prevents the multiplication of bacteria
- Eliminates *Pseudomonas aeruginosa*, *Staphylococcus aureus*, *Escherichia Coli* within 24 hours

ACTIVE CARBON WOUND DRESSING

9 cm × 10 cm

The products are basically made from practically pure carbon microfiber (99.999%) at a high temperature. The use of carbon has been known in medicine for a long time, but only these products are one of the few that can be applied directly to wounds, thereby accelerating the excellent effects of carbon to the maximum. The special PoP/Vi support layer guarantees good suction of wound secretions, but at the same time ensures the mechanism of a suitable moist wound microclimate.

The products are intended for both human and veterinary use.

Mr. Václav

non-healing wound in the foot for 3 years, after a month of using carbon the foot is in much better condition.

Mr. Martin

finger burn while cooking pot stew. It did not heal well, we applied a patch with a carbon pad.

Mr. Olda

at the cabin - woodworking, very sharp ax. Most people have an oil rag and a sock at the cabin for first aid treatment. Mr. Olda was equipped with a 9x10 cm carbon cover. He soaked the carbon cover with water, put it on the wound, covered it with a bandage and drank a bottle of beer. The hospital is far away from the scene. A medical professional (mother-in-law) who was in the area, after removing the bandage, judged that no further intervention was needed. Mr. Olda has a bit of a scar on his leg because the wound was not sewn up, but he is not worried about it, he still lives with his wife and two daughters and goes to the cottage.

In Australia, our carbon pad patches were tested by sheep shearers. When a sheep shearer scratches him/herself while shearing, an unpleasant sore appears in the affected area. They call it sheep shearer's disease. Carbon cleans the affected area, sucks out inappropriate things donated by the sheep, the wound heals faster and the carbon pad also suppresses pain in the area.
